

I am highly suspicious and deeply concerned over the prospect of BPl being deployed nationwide. It has been PROVEN, even by companies' own tests and engineers, that BPL WILL cause MASSIVE interference to High Frequency communications from 2 thru 80 MHZ. Yet, the agency that is charged with protecting the interests of ALL US citizens with the USA has broadly endorsed this, IMHO, dangerous and expensive technology(?). Without being confrontational, it seems as tho FCC has been snowed, or even bought off in light of its wholehearted endorsement of BPL. I am sorry if there is information I am not aware of, but it just seems highly curious in light of the fact that OTHER countries have backed away from BPL because of HUGE interference concerns. Why are you not taking not of this?

I am only one man--maybe crying in the wilderness. Perhaps we can't see the forest for the \$\$\$\$ trees??

Respectfully,

Jerry Oxendine
